

Pedestrian Barrier Gates (PG)

Simple, yet effective, barrier gates used as both a visual and physical barricade to warn pedestrians of a potential danger or restricted area. They are commonly used in pedestrian walkways to warn pedestrians of a forklift intersection.

- **Universal hinge can be installed on the left or right side**
- **Self-closing with gravity, no springs or compression**
- **Can be mounted on a single post without the need for a support**
- **Can attach warning signage**
- **Not for fall protection**

PG-S - Can be cut onsite for any size up to 50"
